	salinarius	417	—	194
	tarsalis	415	—	191
Psorophora	ferox	362	~ 192	—

Notes:

- ~ Amplicon length inferred from alignments to other mosquito sequences of the same genus provided for sequences not spanning oligonucleotide binding sites.
- No amplification possible given oligonucleotide specificity.
- * Amplicon length estimation not possible.
- Ae. notoscriptus* has two complementary sites for the extensible 3' end (last 7 bases) of Mosq-RAE2
